

1. ANC Is Not Complete Silence

ANC reduces but does not eliminate ambient noise — it is not equivalent to over-ear noise-cancelling headphones. Customers expecting complete silence may find in-ear ANC less effective by nature of the form factor.

2. Battery Capacity Decreases Over Time

Battery capacity naturally decreases over the product's lifespan; this is expected lithium-ion battery behavior, not a defect, after the first year.

3. Not Suitable for Competitive Gaming

Bluetooth audio latency of 120-180ms makes the Pulse unsuitable for competitive gaming or precise audio-visual sync tasks. A wired headset is recommended for those use cases.

4. Not Swimproof

The IPX5 rating protects against sweat and splashes but does not make the earbuds swimproof or safe for submersion. Swimming or showering with these is not recommended and may void warranty coverage for water damage.

5. Wireless Range Is Affected by Obstructions

The wireless range of 10 meters assumes clear line of sight. Walls, doors, and other obstructions will reduce the effective range.

6. Not Covered: Physical Damage from Drops

Damage resulting from the earbuds or case being dropped, crushed, or otherwise physically impacted is not covered under warranty. This includes cracked cases, bent charging pins, or broken housings caused by drops or impact.

7. Not Covered: Loss or Theft

The warranty does not cover earbuds or cases that are lost or stolen. ShopNest is unable to replace or refund products that are no longer in the customer's possession due to loss or theft.

8. Not a Substitute for Hearing Protection

The ShopNest Pulse is designed for entertainment and communication, not as hearing protection equipment. It should not be relied upon in environments requiring certified hearing protection, such as around industrial machinery or firearms.

9. Not Dust-Sealed

The IPX5 rating covers water and sweat resistance only and does not include dust or particulate protection. Extended use in sandy, dusty, or debris-heavy environments may affect performance over time and is not covered under warranty if dust ingress is found to be the cause of a malfunction.

10. Limited Multipoint Connection

The ShopNest Pulse supports connecting to a maximum of 2 devices simultaneously. It cannot maintain active connections to more than 2 devices at the same time, and switching to a third device requires disconnecting one of the existing two.

11. No Wireless Charging Support

The ShopNest Pulse charging case charges via USB-C cable only. It does not support Qi wireless charging pads or any other wireless charging standard.

12. Not Compatible with Wired Listening

The ShopNest Pulse is a fully wireless product and has no wired audio input option. It cannot be used with an audio cable if the battery is depleted or Bluetooth is unavailable.

13. Voice Assistant Requires Phone Connectivity

Since the earbuds rely on the connected phone's own voice assistant, triple-tap activation will not work if the phone has no signal, is in airplane mode, or has its voice assistant disabled. This is a limitation of the relay design, not a defect in the earbuds themselves.

14. Not Designed for Extreme Temperatures

The ShopNest Pulse is designed for typical everyday temperature ranges. Prolonged exposure to extreme heat (such as a closed car in direct sun) or extreme cold may temporarily affect battery performance and is not considered a hardware defect covered under warranty.

15. Case Battery Degrades Independently of Earbuds

The charging case has its own internal battery that ages separately from the earbud batteries. It is possible for the case's maximum charge capacity to decrease over time even if the earbuds themselves are performing normally — this is expected lithium-ion battery behavior for the case, not a product defect.
